Skills:		Java Script, Node.js, Expressjs, jQuery, jQueryUI, Underscorejs, Angularjs, MongoDB, Mongoose Code Debugging, Git HTML5, CSS3, Twitter Bootstrap Cutting PSD into HTML Linux, Heroku, Windows
Experience:	01.2013	Freelancer As a freelance I have worked on various projects that required development of both front-end and back-end systems. I am able to fully integrate into all aspects of the application development life cycle. This includes collating client requirements through to planning and designing database structures to implement business logic. I have the ability to engage with graphic designers to create templates and assist with user interface design. Projects: http://wordgame.danat.dk/ - User friendly game to help people learn and memorize foreign words and phrases, by displaying them in certain sequence. Fully distributed app, due to the design, which was to utilise the local storage in the browser. Therefore removing any dependency on configuring a central server. http://d247.org/ - This project lets user to add new goals or plans, share them, set the deadline and enjoy by realizing them. The portal is built by JavaScript, jQuery, Node.js (framework expressjs), Passport.js (user authentication). The data was stored in MongoDB and cached in Redis. The primary require was to ensure that the frontend was fully responsive. Users were able to login through Google oauth. All comments and opinions about users' goals are supported by Disqus.
	02.2012 ó 01.2013	Maternity Spending time with my son, bough many valuable skills for example the ability to remain calm in chaotic situations, multi-tasking and being creative/imaginative on a daily basis.
